Arctic Mixed-Phase Cloud¹

- Cloud

- 111 km along sensor LOS
- FASCOD subarctic winter
- Micron-sized droplets
- Oriented ice plates
- Oriented snow spheroids

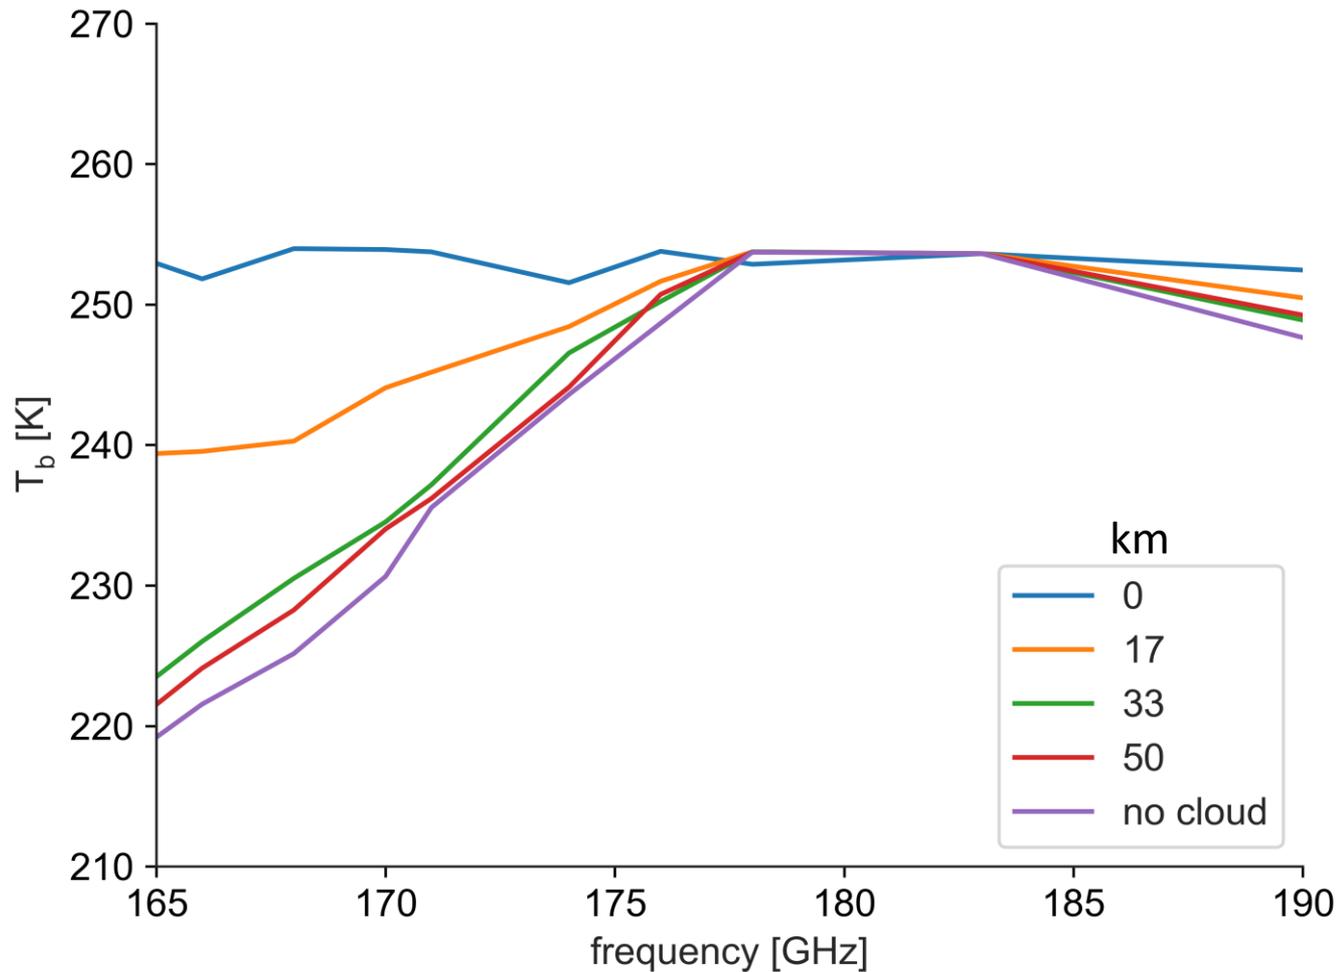

- Sensor

- 1350 m altitude
- $T_{\text{amb}} = -15^{\circ}\text{C}$ @ flt. altitude
- NEDT = 0.5 K
- HPBW = 1°

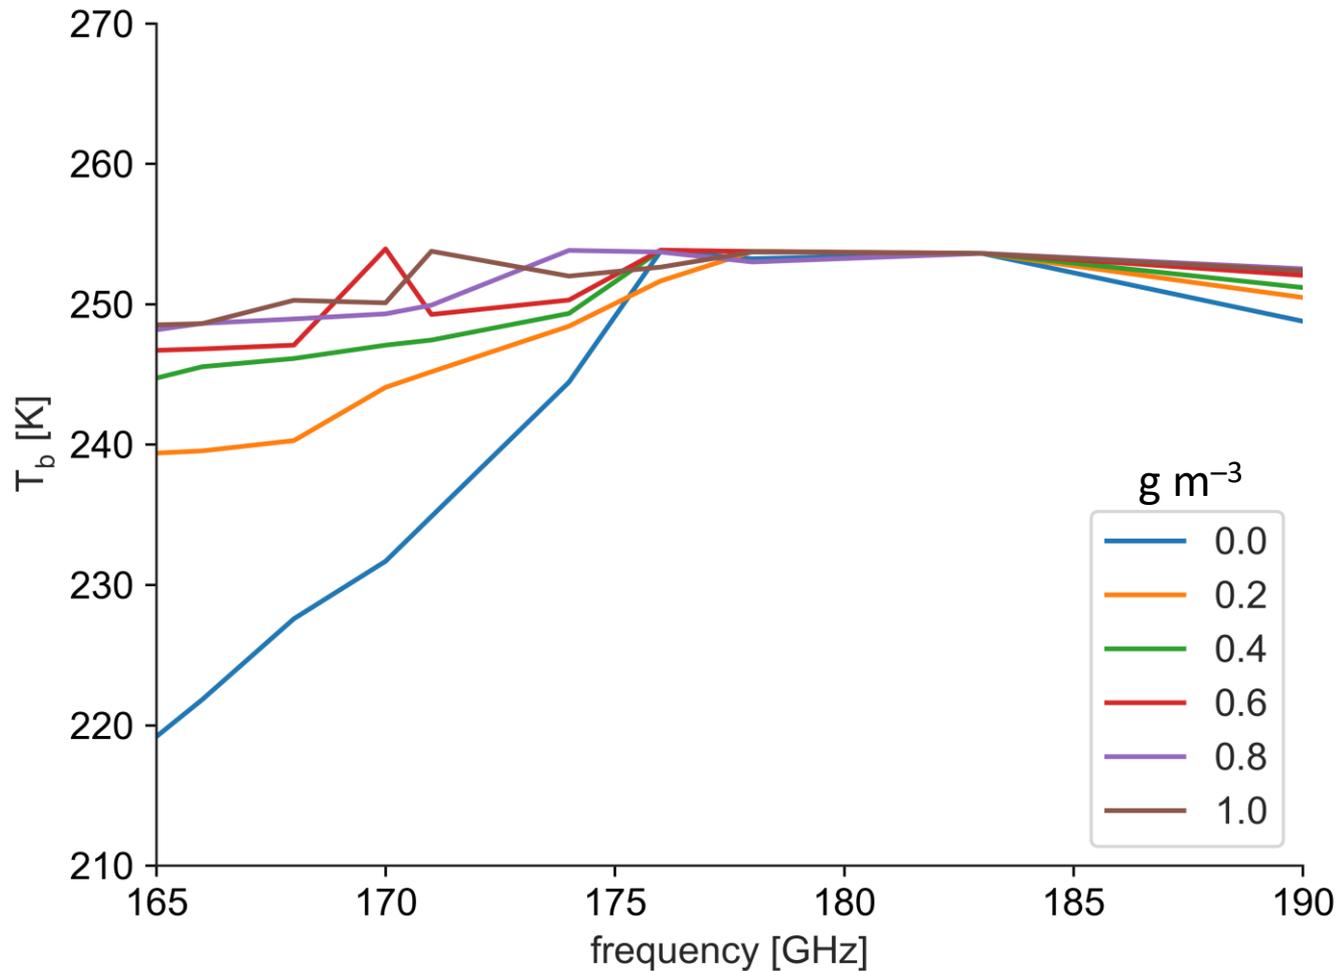

¹Shupe et al. 2008 (10.1175/2008BAMS2378.1)

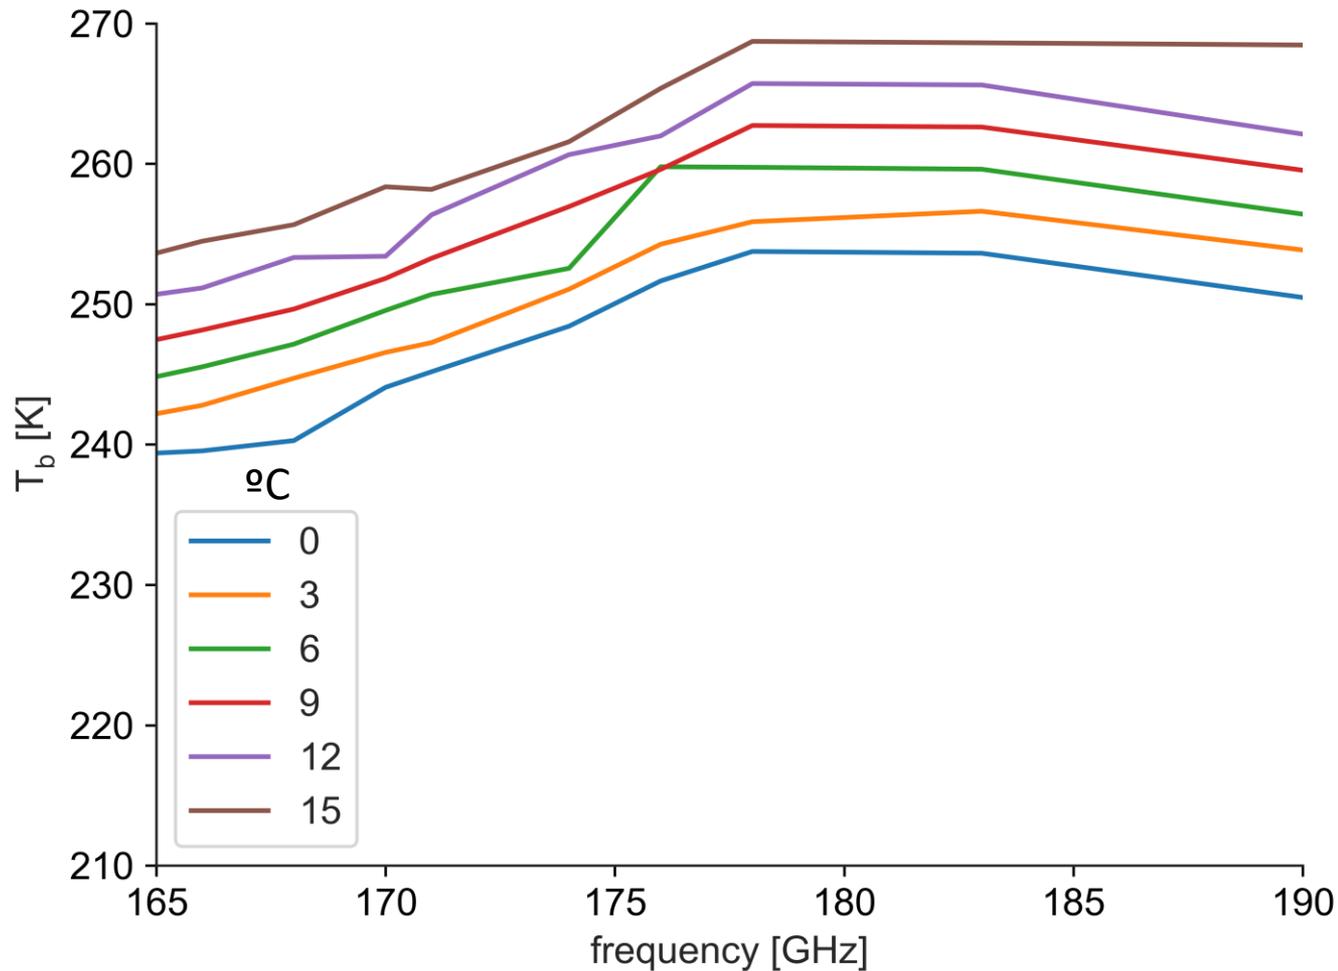

Varying Distance ($LWC = 0.2 \text{ g m}^{-3}$, $T_{\text{shift}} = 0^\circ\text{C}$)

Varying Liquid ($d = 17 \text{ km}$, $T_{\text{shift}} = 0^\circ\text{C}$)

Varying T_{shift} ($d = 17 \text{ km}$, $\text{LWC} = 0.2 \text{ g m}^{-3}$)

G-band Results

- Strong dependence on distance to cloud
 - Maximum range exceeds well beyond 15 km
- Strong dependence on liquid
- Adding shift to temperature profile shifts T_b
 - Temperature offset to FASCOD temperature profile
